

Some schools are participating in a cookie dough fundraiser, and the shipment has been delivered.

- Each pallet has 10 cartons
- Each carton has 10 boxes
- Each box has 10 cookies

1. One school's shipment consists of 4 pallets, 6 cartons, 3 boxes and 2 individually wrapped cookies. If the shipment needs to be shared equally among 4 classes, what is the most efficient way to share the cookies?

2. Another school also receives a shipment. They receive 8 cartons, 9 boxes and 5 individually wrapped cookies that need to be shared among 5 classes. What is the most efficient way to share the cookies?
